

Windows 7 – Supplement

Since giving the talk I have come across another interesting article about tweaking Windows 7. I don't have time to turn it into text, so the file is rather large as it contains six scanned images. To reduce size high compression has been used, but the images should still be quite readable.

Also – since giving the talk, I have discovered that the Aero Peek effects can only be used if you have selected an Aero Theme (assuming your machine has a suitable specification too)
